

“Three steps to  
*remarkable* results”

**Arla Foods Ingredients**

Discovering the wonders of whey

# LET'S INNOVATE TOGETHER

## *Three steps to great results*

At Arla Foods Ingredients, our experienced team of technicians, specialists and scientists can help you discover and realise the wonders of whey. We have worked with milk-based protein for decades and invest in continuous research and development to further unlock its potential. Milk-based protein is a versatile food ingredient which can be added to recipes to promote nutrition, improve texture, prolong freshness and increase yield for industrial food and beverage products.

Our three-step Discover, Develop, Deploy programme is your opportunity to explore new product horizons, improve your existing products, and strengthen business results. Through our application centres, we can help you get your product to market faster, improve cost efficiency and provide nutritional benefits for your customers.

In a collaborative effort between you and our team, success is within reach through our three-step programme:

**Discover** how whey-based ingredients can help lift your product's success.

**Develop** a solution in our application centre.

**Deploy** the solution on a commercial scale at your production facility.

## 1 Discover

The journey of discovery starts here. We work closely with you to pinpoint a precise and measurable set of objectives to define the criteria for success. Through a briefing process, we identify the specification requirements for your new product, to ensure everyone involved is well equipped for the challenge ahead. With absolute confidentiality, we can help you develop new nutritious products, with great taste and texture.

*"With more than 40 technicians, specialists and scientists on hand, we help you discover new and successful products for your business."*

Peter Schouw Andersen  
Director, Application Science and Technology

## 2 Develop

We develop, produce and analyse food products in our high-tech application centres, which we also utilise to discover novel functionalities of valuable new protein fractions. The doors are open for you to be a part of the discovering journey at our application centres located in Denmark and Argentina.

## 3 Deploy

A comprehensive evaluation is always completed, ensuring that every achievement and learning is captured. The process is documented from start to finish, providing a solid reference for full implementation on your production line to upscale your new product successfully.
